SUMMARY

I build gameplay systems in Unity/C# and backend prototypes with .NET. Co-created and released an Android game in a two-person team, with primary responsibility for programming and gameplay. Seeking Software Engineer, Unity Developer or C#/.NET opportunities.

SELECTED PROJECTS

Humanity's Last Stand | Released Android game | Unity, C#

Co-created and published the game; took primary responsibility for programming and gameplay. My teammate focused mainly on models and assets. Also contributed to game design, testing, store icons and descriptions, and release preparation.

1,000+ Google Play downloads (public store bracket, checked 16 October 2026). Gameplay & project | Google Play

Blackbox | Backend reliability prototype | ASP.NET Core, PostgreSQL, Kafka

Built a transactional outbox prototype with EF Core: workflow state and events commit together; a worker claims pending records with FOR UPDATE SKIP LOCKED and publishes to Kafka.

Documented the acknowledgement-to-commit failure window, functional tests and current deduplication limitations. Private repository; public case study and code excerpts.

Flying AI Swarm | Public Unity/C# prototype | Jobs, Burst, spatial hashing

Implemented flocking, formation strategies, state machines and object pooling, including a Burst-compiled IJobParallelFor. Public source, architecture and setup notes. Reproducible frame-time and allocation benchmarks are pending.

TECHNICAL SKILLS

Unity: C#, gameplay systems, Jobs, Burst, state machines, object pooling.
Backend projects: .NET, ASP.NET Core, EF Core, PostgreSQL, SQL, Kafka, Docker.
Engineering: Git, unit and integration testing, Playwright API tests.

EDUCATION

Uniwersytet Ekonomiczny we Wrocławiu
Business Informatics (Informatyka w biznesie), bachelor's programme | Oct 2023 - Jun 2026
